

# Management Criteria for Regulated Chemicals

Version 5.00, July 2024

OMRON Corporation

Device and Module Solutions Company

## 1. Purpose

This document specifies the scope covered by “*Certificate of Non-inclusion for Prohibited Substances in Products*” (hereinafter, “Certificate of Non-inclusion”) issued by Device and Module Solutions Company of OMRON (hereinafter, “OMRON”).

## 2. Scope

This document applies to OMRON products (products and parts (including accessories and individual packaging materials)) certified and covered by Certificate of Non-inclusion issued by OMRON.

This document is intended for products at the time of shipment, excluding products processed or contaminated after the shipment or during distribution.

## 3. Restrictions

### 3.1. Regulated Substances

(1) Attachment 2, “*List of Regulated Chemical Substances*,” lists prohibited chemicals rated as Rank-A

(2) Attachment 3, “*List of Exempted Applications*,” lists exempted uses of the prohibited chemicals

(3) For the reference substances of Item (1) substance groups, refer to IEC62474 RSL. It can be downloaded from:

<http://std.iec.ch/iec62474/iec62474.nsf>

### 3.2. Designation of Regulated Chemicals

Based on “IEC62474 for electrical and electronic components” and etc, regulated chemical substances are designated and rated on chemSHERPA.

Rank A (prohibited substances/applications)

Substances whose content is already banned by laws and regulations, or substances/applications designated as banned to use by OMRON originally.

Relative laws and regulations are listed in Attachment 2, “*List of Regulated Chemical Substances*.”

## Attachment 1. Terms and Definitions

### 1. Regulated chemicals /Regulated chemical substances

Chemical substances whose use for or in products is prohibited or restricted, or whose contents shall be identified by laws and regulations in countries, or chemical substances whose contents and usage are identified and restricted by OMRON voluntarily due to their hazardous properties.

### 2. Contain a chemical or use of a chemical

When the content of a chemical substance in a Part or material is more than the level specified by the content determination criterion, it is determined that the chemical is contained in the Part or material. The decision is made also based on whether or not the chemical is intentionally used, whether or not its concentration exceeds threshold values, or whether or not its use is restricted.

Refer to Attachment 2, "*List of Restricted Chemical Substances*" and Attachment 3, "*List of Exempted Applications*" for details of the determination process.

### 3. Non-inclusion

Non-inclusion of a chemical substance means that the content of the chemical substance is less than the threshold value specified by the content determination criteria, including cases where the chemical is not intentionally used, where its concentration is less than or equivalent to the threshold concentration values, or where the chemicals is not intended for restricted uses.

Even if a restricted chemical is used in a production process for a product, "non-inclusion" of the chemical can be determined unless the chemical remains in the product.

(For example, when a volatile solvent is used to clean a component, the solvent will not remain with or in the component, and therefore you can determine "non-inclusion" of the chemical substance.)

### 4. Content determination criteria

The content determination criteria determine whether the content of chemical substances exceeds respectively regulated levels or not. The criteria specify restricted uses and applicable threshold values, based on regulatory requirements, international standards, and other relative regulations.

### 5. Intentional use

Intentional use of chemicals refers to intentionally adding, filling or applying restricted chemicals for the purpose of continuously sustaining functionality or quality of products, parts or materials.

### 6. homogeneous material

Homogeneous material means a material of "uniform composition throughout" that cannot be mechanically disjointed or separated into different materials (by mechanical actions such as unscrewing, cutting, crushing, grinding and abrasive processes).

Examples of homogeneous materials include different types of plastics, ceramics, glasses, metals, plating, paper, unpopulated boards, resins, and coating.

### 7. Articles

items given specific shape, appearance or design during its manufacturing to serve its function in its end application rather than the functions of its chemical composition.

For products comprised of one or more articles, each component shall be considered as an article (based on the decision of the European Court of Justice in September 2015).

### 8. IEC 62474

IEC 62472, standing for the International Electrotechnical Commission (IEC) 62474 Material Declaration Standard (for the electrical and electronics industry), specifies procedures, formats and other details required for material declarations of products supplied in the electrical and electronics industry. Substances and substance groups satisfying this standard are uploaded to the IEC 62474 database.

9. chemSHERPA

This is a communication scheme used for sharing information of chemicals contained in products throughout the supply chain. The scheme was developed by the Ministry of Economy, Trade and Industry (METI) of Japan, and is maintained and managed by the Joint Article Management Promotion-consortium (JAMP).

**Attachment 2. List of Regulated Chemical Substances**

The cautions about "Note" used in the list are as follows.

Cautions :

Note 1 The ID is defined in IEC62474DSL. IEC62474DSL is a list of declarable substance groups and declarable substances specified by IEC62474. It can be downloaded from:

<http://std.iec.ch/iec62474/iec62474.nsf>

Note 2 The "Reporting Level" means the threshold level for concentrations which are calculated by dividing the content of the substance by the weight of the product, homogeneous material, or constituent part containing the substance (denominator for calculating the content rate).

The terms, Part, and Material, indicated in the List mean the following, respectively.

Product = OMRON Part = constituent part, Articles , Material = Homogeneous material

Note 3 Number deleted.

Note 4 The substance / substance group has exempted applications. Refer to Attachment 3.

Note 5 As the threshold level is indicated as the content rate of the subject element, the calculation of content rates is based on the subject element's conversion factor.

Note 6 Although not included in "Compliance" of chemSHERPA, Omron has added the requirement, including applications, threshold values and exempted applications, based on laws and regulations.

Note 7 Heavy metals (cadmium, hexavalent chromium, lead, mercury) in packaging materials, Polyvinyl chloride (PVC), Tris(2-chloro-1-methylethyl) phosphate (TCPP), Tris(1,3-dichloro-2-propyl)phosphate (TDCPP), PFHxS and its salts, and PFHxS related substances, and Mineral oil aromatic hydrocarbons comprising from 1 to 7 aromatic rings (MOAH) are substances that OMRON specifically self-added.

Note 8 The statement, "Prolonged skin contact is evident," means that the subject part or material in contact with the skin will fail the EN 1811 test.

Examples includes the following:

Earrings, necklaces, bracelets, chains, anklets (ankle accessories), rings, watches (watch case, strap, buckle), rivets (buttons, fasteners, zippers), and other metal items to be attached to clothing.

Note 9 The following nine product types are subject to the reporting requirement. Report only when applicable.

[1] Cathode-ray tube equipment, [2] Cathode-ray tube, [3] Computer monitor with cathode-ray tube, [4] Cathode-ray tube television, [5] Laptop computer with liquid crystal display, [6] Desktop liquid crystal display, [7] Liquid crystal display screen television, [8] Portable DVD player with liquid crystal display screen, [9] Plasma television

Note 10 Packaging materials refer to materials used for transportation, buffering, and storage of OMRON products. All materials such as paper and plastic are eligible. Specifically, product exterior boxes, bags, cushioning materials, and labels attached to them are applicable.

Note 11 For examples of the substance group's substances, refer to IEC62474 RSL. IEC62474 RSL is a list of reference substances specified by IEC62474. It can be downloaded from:

<http://std.iec.ch/iec62474/iec62474.nsf>

The cautions about "Note" used in the list are as follows.

Cautions :

Note 1 "Industrial displays" are electronic displays designed only for use in industrial environments, and at a minimum must satisfy all the following (a) to (d).

(a) Operation must be possible at 0 to 50°C, (b) there must be no condensation at 20 to 90% humidity, (c) at least IP65 must be satisfied, and (d) must satisfy EMC immunity in an industrial environment
